Hello,

Welcome to OpenAI's Researcher Access Program and API!

As part of the Researcher Access program, you'll receive credits to use the API to support your research. The credits are typically allocated 1-2 weeks from receiving this email, if you do not receive your credits within 3 weeks, please email researcheraccess@openai.com.

Please note that the amount of credits you have received may not match what you have requested in your application. You will be able to see this amount once they have been processed through your account. For more details on credits, see the Credits section below.

Please read this email carefully, as you will be given important information about the program and your API access. In your application, you might have indicated your interest in various models. Please note that, unless otherwise specified in this communication, you have been granted access exclusively to GPT-4. Note that fine-tuning on GPT 3.5 is publicly available and applicable for most use cases.

Your primary contacts for Researcher Access :

- For technical difficulties (rate limit questions, access to models or other errors) please chat with help.openai.com. If they are unable to answer your questions, they will redirect to the right internal teams. Please be patient while we get to your queries!

- researcheraccess@openai.com - This is our primary line for general queries and communication throughout your research lifecycle. If you have any questions that are technically related to API access, we recommend that you first see if your question is answered in the Documentation or Resources tabs on the API website.

Extending access to collaborators

If there are additional collaborators you would like to work with on your project you can add them in your account settings, using this link: <https://platform.openai.com/account/members>. Any members added to your organization would be able to share the pool of credits you have allocated for your organization. If you have any issues, feel free to send us an email.

We treat all our researcher access program members as high trust partners and expect folks in this community to help one another follow our policies (such as not sharing API credentials, etc.) and use their best judgment so everyone can have a positive and safe product experience.

Credits

If your research requires additional credits beyond what we've assigned, please reach out to researcheraccess@openai.com with a description of your use case and we can discuss further.

How to check your credit balance

You can view your credit balance at <https://beta.openai.com/account/usage>. Keep in mind this credit balance applies not just to you individually, but to everyone in your research group.

Duration of access

As a participant in the Researcher Access Program, you will receive free access to the API for the duration of your research agenda. When your research has concluded as per the timeline received in your application or the 12 months have passed (whichever comes first), you can continue using the API but will do so as a standard (paid) account.

Feedback Loop

As part of the Researcher Access Program, we ask that you send us a 1-page summary of your findings as they are relevant to how this would help advance OpenAI's understanding of our models and systems or their impact on society.

Publications

We are eager to support academic partners who are interested in publishing results based on the API.

Papers

- Please use this form to submit your published papers to us: <https://forms.gle/SfPEkQYdLZWfYTjo8> In some cases, we may want to highlight your work internally and/or externally. In others, such as publications that pertain to security or misuse of the API, we may want to take appropriate actions to protect our users.

Datasets

- Since datasets can potentially be used to enable new AI capabilities by third parties and may raise IP considerations, we do require that you get in touch with us to request approval for publishing datasets of API-generated text.

Community guidelines

Even though you will be conducting academic research, keep in mind that you will still be subject to our [Community Guidelines](#).

--

Please don't hesitate to reach out if you have any questions, feedback, or if you'd just like to share general updates on your research. We're super excited to see your results!

We look forward to working with you, and thank you for your participation in this program.

Best,

Researcher Access Team at OpenAI
